

COMP5450SA Mobile Programming
Dr. Sabah Mohammed
Final Exam Programming Environment

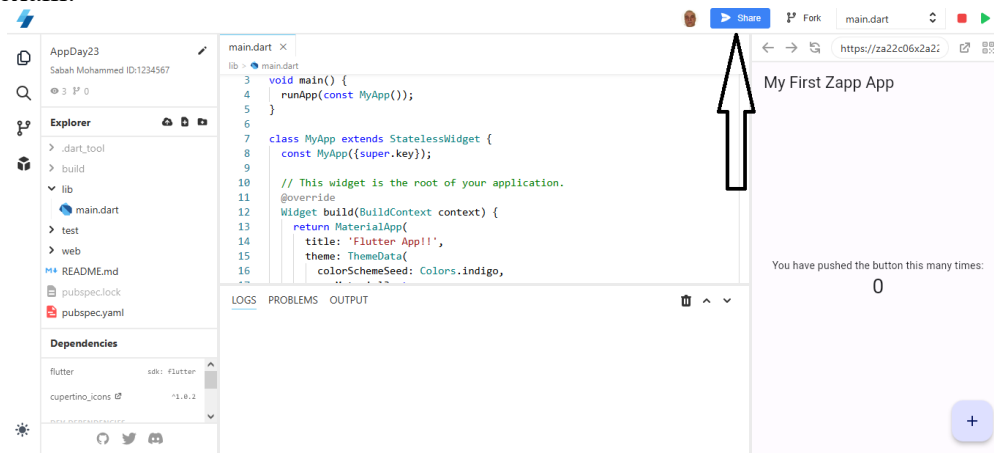

- (1) You need to bring your laptop
- (2) You need to have an internet connection
- (3) You need to use the Zapp Mobile Programming Environment at the exam time
(<https://zapp.run/>). After you accessed the Zapp.run website click the button “Open in Zapp”:

After that edit the project details by naming your App (as the table below e.g. Appday23) and putting your name and student ID in the description:

Finally start working on your App and **share** the link at ReadMe.doc that you will upload it at the end of the exam:

Moreover, it is important at the ReadMe.doc to include the App Shared Link + ScreenShot to the Project Structure and ScreenShot(s) to the App after running as well as to any changes to the pubspec.yaml. Most Important is to Save your Dart files in TXT files and your Assets (e.g. Images) and Zip the ReadMe.doc + Dart Files + Assets in one Zip file. Call the Zipped file as YourLastName_ID.zip.
